

Low Carbohydrate/Low Phosphorus Feline Canned Food Chart

Contains canned cat foods that have less than 10% carbs by dry matter, and less than 300mg phosphorus per 100 calories.

This information is compiled as a reference for cat owners looking to feed a low carbohydrate and low phosphorus canned diet.

We do not endorse any particular brand of food;
this chart is only for your reference.

For more complete information, please visit www.Catinfo.org.

This chart contains the following information:

- Brand of food
- Name of food/meal
- Carbohydrates as a percentage of dry matter
- Protein as a percentage of dry matter
- Milligrams of phosphorus per 100 calories

Numbers of calories per can (can sizes vary and are specified on website)
